Computer Networks & Operating Systems Notes.

A Process Control Block (PCB) contains process state, program counter, CPU registers, memory

Deadlock Handling in Operating Systems.

A deadlock occurs when a set of processes are blocked because each process is holding a resou
Bankers Algorithm is used for deadlock avoidance by verifying safe states.

Transmission Control Protocol (TCP).

TCP provides reliable, ordered, and error-checked delivery of a stream of bytes between applicati
TCP uses a three-way handshake (SYN, SYN-ACK, ACK) to establish a connection before data t
